

# Footnotes to the Network Monitoring Report: C-band N17C3

---

**General:**

- a) **Nt, Noto:** The sampler statistics were not OK for the 2048 Mbps part (50% invalid data).
- b) **Ir, Irbene:** Fainter fringes found at RCP (see standard plots), probably due to a larger rate.
- c) **Cm/Da/Kn/Ta, eMERLIN outstations:** bandpass shape looks odd (see auto corr. plots in standard plots). Although data look OK.
