

Footnotes to the Network Monitoring Report: X-band N21X2

General:

- a) **Nt, Noto:** Using DBBC from the Sardinia Telescope. Did not have a filter compatible with the X-band receiver at the beginning of the observation. Fixed after scan 6.
- b) **Ur, Urumqi:** Receiver at standard temperature due to the compressor being off at the start of the NME. Produced very weak fringes. It cooled down along the NME and the signal was recovered at the end.
- c) **Tr, Toruń:** First light in an EVN run with their X-band receiver.
- d) **Zc, Zelenchukskaya:** Joined in scan 6. Problems with the LCP receiver that led to no signal.
- e) **Ac, Arecibo 12-m:** First time participating. Joined for the last hour (scans 10, 12, and 13). Strong fringes detected in the RCP channels. Potential configuration issues in one of the RDBEs.
