

# EXPreS Display

## Set-up instructions

## Contents:

- 1 pop-up frame
- 6 magnetic strips
- 5 printed panels
- 2 halogen lights
- 2 power cords

## Frame

- Pop open frame and position it where you want the display to finally stand.

## Joints

- Snap middle joints together to secure frame.
- Frame should be concave and will stand without assistance.

## Magnetic Strips

Attach four magnetic strips to the front of the frame and two strips to the back edges of the frame.

## Printed Panels

Note how printed panels have magnetic clips in the corners and magnetic strips along the edges.

## Middle Panels

Starting with middle panels (#2-4), attach panels to the frame.

## Side Panels

Panels #1 and #5 wrap around the sides of the frame and secure to magnets on the front and back of it.

## Lights

Two lights may be attached to the top of the frame. Note: the lights will not snap securely to the frame. Instead, they use gravity to balance between the bars. Diagonal grooves on the lights help guide them into the correct position.
