JUC, 15-09-2017, 11.00

present: Jonathan, Des, Harro, Arpad

Jonathan: had a skype conversation with our Chinese friends. May visit early next year, launch of lunar lander postponed until end of next year. Des has requested the re-installment of a register that holds the timestamp of the current packet, will work on that. When UBs back will check all works (after power failure)

Des: was a test on Monday. Code needs tidying up, together with eBob. Set date to do this! Definitely before next e. Monday: 2 seccessful runs, after much fiddling. Confirmed suspicion that time on UB is still wrong, namely scan start time. Unclear why the first 4 seconds are accepted. Fix next week, check with simulator, then formatter test.

Harro: test Gino's fix hopefully today with fila10G in Onsala, Simon busy though.
