

JUC, 22-03-2016, Arpad's room

present Jonathan, Harro, Des, Arpad

Jonathan: need mac statistics for front nodes, Des will look into this

New code version

- one address for config code for both 16 and 32 MHz
- per station frame length enabled
- few bug fixes in delay correction module

Under test

Mixed 32-16 MHz, has made fix for the strange band assignment, needs testing

Des: ran correlation, some stuff broke but all in all not bad. Need monitoring tools for operators.

Harro: amount of data, or display, not the problem. Tools for SFXC not really adaptable. J2ms2 finds data, JSON, vex file, writes to MS. Need to cut open j2ms2 in a way, only need JSON. Considerable amount of work (2 months?) but is absolutely needed.

Harro: how about status monitor? Monitoring tool that starts up with UniBoard correlation, or poking tool. Des will get onto it, was on his todo list anyway.

Ub2: problems with 1G ethernet. Adjustments to some impedance, now several designs work that did not, but not all. Now changing resistor.
