

JUC, 13/1/2017, 11.00

present Benito, Des, Harro, Jonathan, Arpad

- Benito: will start looking into imaging, first one scan with strong point source, look at differences with SFXC, different flagging of RFI.
- Jonathan: worked on filtering the reply to UDP packets, no reply to port numbers under 1024, this works, applying it to other versions. MMcontrol (registers) should be in module general to all versions, is done, still building
- Des: control code does need work to be really operational for eVLBI, right now too much hacking but possible. Need formatter test first. Need Gino to fix his code.
- New versions of FW need verification, Jon was waiting for Aribox to return (soon?)
- Harro: problems with Rb, too low amplitudes, was hard to see because of normalisation in SFXC. Told Bob that he could do it in UB, offline normalisation after all.
