

JUC meeting, November 28 2013, Arpad's room

present Salvatore, Jonathan, Harro, Des, Arpad

– Jonathan: lower sidebands work, upper: noise in crosses, good autos.

Meeting tomorrow with Mark, Aard, Sergei

Tested with 11 stations. 8 Subbands ok, but now 4 subbands is not ok anymore... Some things changed with setup, checks ongoing.

– Harro: working on using Mark5 for playback into UB. Erlang node on each Mk5, jive5ab does cornerturn, sends w TCP to erlang, from there to UB

Could speed up reading from Aribox, Arpad assures Mk5 much much higher priority

– Salvatore: validity processing done, into packetRX. Simulations beginning, compare old–new

Need documentation. Limited testing needed before switching to new packetRX. Word of warning, functionally everything is in, but nothing has been synthesized yet.
