

JUC meeting, January 29, 11.00, Arpads room

present: Harro, Des, Jonathan, Arpad

Des: handed over job environment to Jonathan, so that he can run jobs without help, fixed some issues with open file descriptors.

Jonathan: 2 different causes of a similar problem. Incorrect handling of errors in MAC, seems to have been fixed. Errors occur less frequently now. Some frames remaining in FIFO after writing to DDR. Signal tap is in, try to see if not enough frames are read, if begin and end address are maybe incorrect. Des will fix things so that output data is not kept (AriBox on the blink). More tests....
