

WURMlet, 25-04-2017, 11.00

present Wybren, Mark, eBob, Harro, Aard, Arpad

Wybren: looking at SNMP system, needs input. Will send email, also to operators! Harro: queries in system are a problem, way too many. ZFS synchL not on basis of files

Mark: fighting with word, deliverable. SFXC: more input nodes per station (needed for 4G, KVN 2G)

eBob: subnetting: ready for test. Need access to db, Des gone. 4G test: data from On, quite fine. DBBC simulator has been adjusted, ready for test. Number of packs from Tr again unreadable, reset record pointer, according to Harro matter of using different FW. Need Serase, which they should do anyway, probably forgot. eBob to send email. 2 VLBA packs had same problem.

Harro: finished TOW lectures. Will work some more on transfer software. Got some requests from supp scientists and Zsolt wrt plotting tool options

Aard: looking at radioastron. No answer from Russians yet. Found complete expt here, with disk packs, did produce fringes. K-band unclear, ask Tatjana?
