WURM, 12-06-2023 13:00 WURM (Library meeting room)

Present Bob, Aard, Paul, Wybren, Ilse (can only participate until 13:45), Des, Mark, Marjolein

Des: CASA VLBI workshop last week, lots of discussions! PolConvert: get wrong order on output, ongoing. DataCite DOIs: w/ production credentials in same code get 404; contacted support. For PapersDB (ZsoltP): duplicate papers issue, filtered manually, they didn't finish the report, so now dupes are back; will really fix after AnnRep. S.Africa have dask+python cal system, need to look into that; there's proper demand for fringefit "stacking".

Ilse: CASA VLBI workshop, after prep and running, now winding up. EVN proposal submitted. EHT internal paper review done (2nd pass). Will travel to Lund (.SE) next week to replace Huib in EC mtng.

Mark: CASA VLBI workshop, manual payment monitoring is awful and comms re. reimburements towards lecturers should be improved. The absence of an overview "who is where" really is hurting work. CASA presentation in Bologna: it's obvious that work done @JIVE goes into science results! CASA VLBI mtng: fall mtng on CASA7/CNGI prototype devs included and we're invited (last week Oct). IVOA interop: RiG session focussed on single dish; new chair/vice chair of RiG: was asked if considering? (yes) so now vice chair!

Wybren: Terena Network Conference = interesting; will compile tripreport and distribute. More broken disks. "code.jive.eu" mails now work (should work). db0: can not import from MySQL v5->v10.4 in one go. Working on flask + nginx config.

Bob: clean up pySCHED manual install commit and OAuth2 branch in TOM and committed. Sent to ORP/LCO mailing list, got (positive) response and will try suggestion. ccsbeta: see Paul's contrib; need to ask operators to do test run.

Paul: workshop support: "evlbi.com" doesn't quite work. Newer O/Ss + ssh becoming more insteresting: STS12/24 firmware upgraded, ciphers accepted but keys not(?). Trantor2/HDDs: no progress. tapebuf0 disk broken, difficult to repair so turn off. Debian Bookwurm out, start upgradie VMs + servers; no point for Bullseye now. Will attend SURFnet networking day 20 Jun. Have own colour post-it!

Aard: tech support @workshop: few occasions user mounts local dir in docker w/ different UIDs: permission errors; fix build to automatically use current UID [Suggestion: can also document this]. Residual DM between sfxc/digifil: OmarOB finds wrong digifil used: two vsns in pipeline, use other vsn fixed diff. ftp fringe tests: "simplefit" clocksearch tool "does not work": BenitoM copied older vsn Sat night into new system so deps incompatible; fixed by copying newest vsn. Toy GPU correlator: VDIF input works, get floating point error + SIGSEGV. Preparatory work on SATOSA proxy. RADIOBLOX WP4 "filter" specification: must fill desired specs, seems idea is to put many features into single kernel.
