WURM, 14-5-2018, 14.00

present: Aard, Mark, eBob, Des, Wybren, Arpad

Aard: not done much last week SFXC to Mk4 code does not crash anymore, HOPS plots still look wrong. e-VLBI problem new and old network still not understood (at start, or after long gap, low weights). Difference is old system uses infiniband, much bigger packets. More tests needed. Larger buffer sizes? Wybren will test on a single 10G, right now bonded dual 10G.

Mark: dusted off code to create polynomials for delays. Akima vs 5th order polynomial agree very nicely. Need high order because of 2 minutes. Need to write doc for importfitsidi.

eBob: looking at DBBC properties for SCHED

Des: UB tes Friday. Start rebasing CASA development against official version. Look at python FF version.

Wybre: flexbuff0 has disks. IPMI software crashes, bug reports. Zabbix is nearly done. Flexbuff7 for Wb, Wb needs access to it.
