

WURMpje, 16-5-2017, 14.00

present: Harro, Paul, Mark, Des, eBob, Wybren, Arpad

Harro: new releases jive5ab, mk5copy, bug fixes. Should check one fix with FS, new session starts Sunday. Work on filetransfer utility

Paul: Trantor is off, cooling in Wb off until Wed. Design and costing of cellar equip nearly done, some more quotes coming in. Sent SFP nrs to US, have not heard back. Working on Chinese SFPs. China transfer fixed, needed 1500 frames. Unclear how this happened. Hart also fixed, keep-alive packets via different path.

Harro: entries in db not really clear, several for Jb. Some discussion, probably results of tests, not much discipline in removing those entries, but not really problem either. Extra field with info supposes discipline. Automatic warning when changes are made? No conclusion

Mark: sent in his deliverable doc. Working on import fits-idi dig correction for difx. Making accor equivalent.

Des: C++ fringe fitter, made one with GSL. Something weird with CASA though, after update, investigating.

eBob: 4G e and normal e last week. Added Kun Ming to Northstar. Nt and Mc will record on flexbuff, in spite of not sending new disks. Will also work on sched and swig.

- Wybren: swapped 10G module. Installed flexbuf 7
