

- e) **Hh, Hartebeesthoek:** No fringes (except some scans with DA193), perhaps a consequence of the room-temperature 22 GHz receiver ($T_{sys} \sim 300$ K) or just poor weather (heavy rain at the station).
- f) **Mh, Metsahovi:** Despite some technical problems (phase lock broken, negative T_{sys}), useful data and fringes from the pipeline. No fringes were seen in the ftp test.
- g) **Sr, Sardinia:** First fringes in K-band! Congrats Sr!
- h) **Md, Medicina (DBBC):** Fringes in some subbands, but significantly weaker than for Mc, and no fringes for central BBCs.
