## Network Monitoring Report: K-band \# 03/I

Source: 3C273,3C345 CepA ... Length: $6 \times 22 \mathrm{~min}$.
Reference antenna: Onsala
Experiment code: N03K1

Date of observations: 09/02/03
Date of report: 17/02/03

Observing mode: Mk IV, mode 512-16-2, dual pol.
Reference date: 09/02/03; 40d 03h 00m
by: Z. Paragi
$\otimes$ According to expectation, no special remarks
Problem occured - see enclosed footnote(s)

- Station did not observe (not scheduled)
$\bigcirc$ Entry not applicable/investigated

## Footnotes to the Network Monitoring Report: K-band \# 03/I

General: Place a general comment here
a) $\mathbf{C m}$, Cambridge: No fringes, probably wrong LO settings
b) Mc, Medicina: No fringes, probably wrong LO settings; initial tape footage was wrong in some scans; difficulties with head peaking (especially on headstack 2)
c) Nt, Noto: The tape was late; somewhat poorer headstack 2 playback (parity errors $\sim 1 e-3$ )
d) Sh , Shanghai: Occasional faint fringes
e) Ur, Urumqi: Somewhat poorer headstack 2 playback (parity errors $\sim 1 e-2-1 e-3$ ); amplitude was low in BBC03, upper sideband
f) Mh, Metsähovi: Very much improved playback on headstack 1, as though tracks 19, 29-33 still have problems (parity errors $\sim 1 \mathrm{e}-2$ )
