JUC, 2-12-2016, 11.00, Arpad's room

present Jonathan, Harro, Des, Benito, Arpad

Benito, Harro: difference in noise SFXC -- JUC. LSB seems to be noisier than USB, even in autos. Could be the flipping process? Jonathan to take a look. Should check 16 MHz, if this is new or was already present in previous versions and not seen.
Find an NME, 16MHz, run with both personalities. Will ask operators.
Harro: glitches, could be caused by different way correlators handle RFI, resolution has different shapes. Doing a re-correlation with SFXC at very high resolution, more smoothing in SFXC?
