

JUC, 7-4-2017, 11.00

present Des, Harro, Jonathan, Benito, Arpad

Des: Benito got operators to run some jobs, had to do quite some work because Aribox had not been restored to original state. Runjob should present the files in correct way, tell eBob! Benito also tried 2 sec integration which is not possible. Should be a warning!

After all this was fixed, will do a test again today. Scans with source with lots of structure

Work on new control system getting there, e-test next week.

Jon: 32 Mhz version on UB1 today, also will check 16 Mhz. Working on 64, wandering fringe still not fixed, seems not to be because of phase calculation error. Looking at delays now, simulating.
