Correlator implementation and Control meeting, 10/01/2013
13.00 local, Arpads room
present Jonathan, Salvatore, Harro, Arpad

short meeting. Main points:

- packetizer seems to produce mangled packets. Once config is wrong,
stays wrong
- all IP addresses, all MAC addresses were identical on both UBs....
- coarse, fine, phase delay all seem to work as they should.
