

JUC, 14-04-2016, 11.00, Arpad's room

present Harro, Des, Arpad

Des: worked on implementing Mark5C support, tried it, broke it, fixed it, finally all seems to start but then keels over because of lack of ocean loading params for Sardinia. Working on that now, will then re-try. Get from SFXC?

Harro: so far, working fringe plot, need test on live data. Now looking at weights, more involved, quite different from way SFXC does it. Warns it might be too slow, however this is at full spectral resolution, which is **not** to be the default, ever. If it works at 32, that is fine. Higher might be needed for debugging, but can easily be accommodated by off-line inspection.
