

JUC meeting, 16-1-2014, Arpad's room

present Harro, Des, Jonathan, Salvatore, Guiffre, Arpad

Jonathan: old packetRX on second UniBoard. Found bug in new packetRX, or rather, UDP packetizer puts one extra word in frame. Make quick and dirty fix, in packetRX, better, but still problems. Will try to find remaining problem, if not, UDP packetizer should get fixed (has more consequences for other bits of design)

Other fix of something that was not really broken, new packetRX took twice as long to write to DDR, now only on boundaries of 4, much faster and neater.

Jonathan is also working on documentation, tomorrow, next week

Des and Harro: several Mark5s have been Lennified and equipped with correct Erlang. Next step is to get system working, Des needs to put work into Hilado because of demo. Try to parcel off part of work to Harro.

Guiffre: had no time yet to make a plan, will do so tomorrow, send it around for comments
