

Tiny little WURM, 31-07-2018, 13.15

present Paul, Mark, eBob, Arpad

Paul: has been testing WR link Wb-Grn-Wb. Link works fine, might be a problem with maser. Finishing a plan for the local fiber. 500m available in Wb, max needed 350. September: end of consortium, totally unclear what will happen. UB: still some issues with IP numbers in unictl? Wait for Harro to return (next week). Martin has asked for account on redmine, will take care of that. Arpad: would be good if problem with new cluster and e-VLBI were solved, eBob can run simulated stations, Wybren was supposed to leave some info for Paul before going off on vacation. Will take a look.

Mark: eMerlin now delivers two freq bands per station, need mods to SFXC (was needed anyway). Some parseltongue questions, some FF questions.

eBob: SCHED release with support scientists, should be able to make a real schedule now without intervention of dr Bob. Re-writing log2vex in Python. Flexbuff in On died, mount points were not properly restored, lots of data missing. Fixed, all data is there.
